

### Introduction

Smilo platform is the first platform which supports the combination of hybrid transactions, hybrid smart contracts and hybrid decentralised applications — with 'hybrid' referring to both public and private.

Smilo's intent is to use the blockchain to create an alternative protocol for decentralised applications.

### Unique strength

Smilo's unique strength comes from the combination of multiple features:

- Hybrid transactions
- Hybrid smart contracts
- Hybrid decentralised applications
- Transparency
- Privacy and anonymity
- Connection to real life applications

### Problem

Today's businesses, institutes, corporations and (non) government organizations are pressured to make a transition to a more sustainable state.

Consumers demand sustainable products and services, while privacy, transparency and security are guaranteed.

[Click here for an example.](#)

### Solution

Smilo platform allows the user to choose between public and private transactions, -smart contracts and -decentralised applications.

Thus, with Smilo platform, companies, governments and organizations are able to create a more transparent environment.

### Team - Full team on smilo.io

**Elkan Roelen** - Director of Technology  
10+ years of experience in development, security and performance testing and DevOps.  
9+ years of blockchain experience.

**Andy Kalbvleesch** - Director of Operations  
20+ years of experience in entrepreneurship, software- and business development.  
5+ years of blockchain experience.

**Patrick Joore** - Director of Marketing  
25+ years of experience with brand building and marketing. Worked with a wide variety of blue-chip clients. Patrick will help Smilo with strategic partnerships.

### Token model

Two types of tokens that drive the network:

With Smilo tokens the user has the power to influence the network itself.

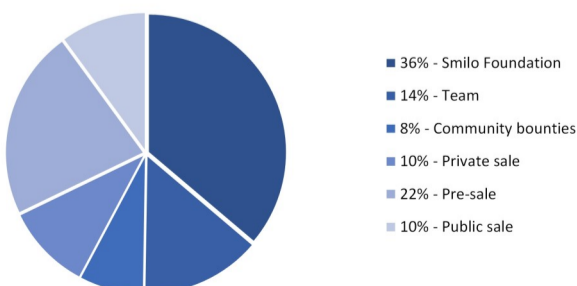

SmiloPay tokens are staked through Smilo tokens, and are used for the service fees.

### ICO

1 Smilo = 0,25 USD

To qualify for community bounties, you have to actively contribute to the Smilo platform.
